

CONSENT FOR INJECTIONS OF BOTULINUM A TOXIN

Botulinum A Toxin (Botox) injection is used in cosmetic treatments for glabella frown lines (wrinkles between the eyebrows), forehead lines and crow's feet (lines around the lower eyes). Botulinum A Toxin (Botox) is approved by the Food and Drug Administration (FDA) for the treatment of eyelid spasm and muscle spasm. Although used for cosmetic treatment of glabella frown lines, forehead lines and crow's feet, Botulinum A Toxin (Botox) is now approved by the FDA for that purpose.

Injection of this material into the small muscles between the brows, in the forehead, and at the corners of the eyes causes those specific muscles to halt their function (be paralyzed), thereby improving the appearance of the wrinkles. This paralysis is temporary, and reinjection is necessary within three to six months to maintain the result. It has been explained to me that other temporary and more permanent treatments are available. Complications are rare but may include paralysis of a nearby muscle resulting in a temporary loss of function (i.e. drooping eyelid).

CONSENT: I, _____ understand that Dr Anne Marie Reed will inject Botulinum A Toxin (Botox) into the glabella, forehead or crow's feet muscle to paralyze these muscles temporarily.

I understand the goal is to decrease the wrinkles in that area. I understand that complications are rare but may include temporary paralysis of other nearby muscles, headache, local numbness, rash, and bruising.

I understand there is no guarantee of results of any treatment.

I agree to have my pre and post operative photos taken for my record.

I have read this entire information sheet and authorize Dr Anne Marie Reed to inject Botulinum A Toxin (Botox) into the muscle determined appropriate to improve my wrinkles.

There will be a per unit charge for "touch ups" since they require additional Botox medication.
